Such happy to finish this thesis! Looking back to the past few years, I am filled with all sorts of feelings and memories. It is my good fortune having many kind people surrounding me. They were always helping and supporting me during my research. Without their help, this thesis is not possible to achieve. It would be worth to express my great appreciation to them in these pages.

Foremost, I would like to show my deepest gratitude to my supervisor, Prof. Katja Loos, for the chance to become a part of our group! Katja, thank you for encouraging me to study abroad and for the help on my scholarship application at the beginning of 2011! Your quick responses to my emails were really impressive and touching for me. Several months later, I got the chance to work in your group on the project as written in the proposal. Since then, you always kindly help me to get the accesses to the instruments I needed and to find the people I could discuss. Thanks for the freedom I had on my research which helped me to develop into an independent scientist. Also thank you for the support on my participation of various national and international conferences that allowed me to be able to communicate with and learn from the experts outside our university. Your useful suggestions, discussions and corrections enable my papers to be published and this thesis to be done. Thank you.

I also would like to thank the member of the reading committee: Prof. A. H. E. Müller, Prof. Alexander Böker, and Prof. Prof. G. ten Brinke for the time and the evaluation on my thesis. I want to express my special thanks to you for attending my defense as well.

I greatly appreciate Prof. Francesco Picchioni for the access to the setup of CO₂, the discussion on my project and also witting one paper together. I would like to thank Marcel de Vries for the technical support on the CO₂ setup and experiments. The discussions with you are always inspired and joyful.

I am very grateful to Albert Woortman. Albert, you are always quite patient to help managing our lab, maintaining the instruments, searching the accessories and chemicals I need. You are also the expert for GPC measurements and the analysis. I really enjoy the lunch time and was happy to chat with you.

I would like to acknowledge Gert Alberda van Ekenstein for the help with DSC and TGA measurements, Dr. Marc Stuart for his technical assistance on TEM, and Jan Harkema for the access to the spectroscopic ellipsometry. I great appreciate Dr.

Daniel Hermida Merino for the help to design and build the in-situ CO₂ SAXS setup for the trial measurements at the Dutch-Belgian beamline (ESRF, Grenoble, France). I am also grateful to Dr. Evgeny Polushkin for the support on the SEM imaging and the help during the SAXS measurements in Grenoble.

I would like to gratefully thank the people in the Polymer Chemistry Department who kept supporting and helping me during my research. Many thanks to Karin, Yvonne, Martine and Andrea for their help at start and during my PhD with the paper work! Jakob, I guess you probably even didn't realize that you helped me so much, especially in my first month in Groningen. You were so kind to help me applying the door-pass card for our building, showing me the inside construction of our building, arranging all the items I need in the lab and the office, and also introducing me to people during the coffee break time, chatting with me on the culture differences.....you let me feel warmly welcomed and get adapt to the new environment quickly. Thank you so much. I sincerely wish you a good future. Erythrina, thank you for all you instructions on the courses from our graduate school, your helps in the lab, the chat with me during our break time, the wonderful experience of skiing together your encouragements, and the accompanying during my hard time.
